SEASONAL ASSORTMENTS

SUMMER

CHASP10

Work and Play Spark Plug Display Assortment

This Champion Display Assortment (CHASP10) is exclusively designed for summer work and play small engines. It includes the spark plugs you need to help power them through the summer!

- 48 Champion popular small engine spark plugs for summer work and play: 8 each of Small Engine RJ19LM, RCJ8 and J8C, and Power Sport 8809, 8902 and 8812
- Easy to use application guide
- Attention-grabbing counter display

WINTER

CHAWT09

Spark Plug Display Assortment

This powerful Champion spark plug Assortment Display (CHAWT09) is exclusively designed for hard working winter season small engines. It comes complete with everything your customers need – for whatever drives them through the snow.

- 48 Champion spark plugs for popular winter small engines: 16 RJ19LM, and 8 each of N4C, RJ17LM, J8C and RC12YC
- Easy to use application guide
- Attention-grabbing counter display
- Product features and benefits

RC12PMCB3

- R Resistor
- C M14 x 1.25 thread, .750" thread reach, gasketed seat, 5/8" hex
- 12 Heat range (automotive & small engine)
- P Contains platinum in the center electrode
- M 0.0100 to 0.140" core projection
- C Contains copper in the ground electrode
- B Fine wire rivet design (**Special design feature**)
- 3 Has a 0.030" electrode gap by design

R

Resistor	
*	Description

K	Resistor - 1k - 2k ohm
Q	Low resistance, inductive supressor
R	Resistor - 3k ohm / 10k ohm
U	Internal auxillary air gap (booster gap)
X	Combined resistive / inductive suppression

If the very first character listed in the plug type number is NOT one of the characters listed above, the plug is a non-resistor type. (It does not contain a resistor).

C

Shell Design				
*	Thread	Reach	Seat	Hex

A	M12x1.25	0.750"	gasket	5/8"or 18mm
C	M14x1.25	0.750"	gasket	5/8"
CJ	M14x1.25	0.375"	gasket	3/4" or 13/16"
D	M18x1.25	0.500"	gasket	7/8"
DJ	M14x1.25	0.307"	taper	5/8"
DZ	M10x1.0	0.500"	taper	5/8"
F	M18x1.5	0.429"	taper	13/16"
G	M10x1.0	0.750"	gasket	5/8"
H	M14x1.25	0.438"	gasket	13/16"
J	M14x1.25	0.375"	gasket	13/16"
L	M14x1.25	0.500"	gasket	13/16"
N	M14x1.25	0.750"	gasket	13/16"
J	M14x1.25	0.375"	gasket	13/16"
L	M14x1.25	0.500"	gasket	13/16"
N	M14x1.25	0.750"	gasket	13/16"
P	M12x1.25	0.492"	gasket	11/16"
S	M14x1.25	0.689"	taper	5/8"
V	M14x1.25	0.441"	taper	5/8"
W	M22.2x1.5	0.625"	gasket	15/16"
Y	M10x1.0	0.375"	gasket	5/8"
Z	M10x1.0	0.500"	gasket	5/8"

The tabulated values generally hold true for the more common plug types. Minor variations may arise from the tabulated values for the less common plug types.

12

Heat Range / Application	
HR	Application

1-25	Automotive & Small Engine
75-99	Industrial & Small Engine

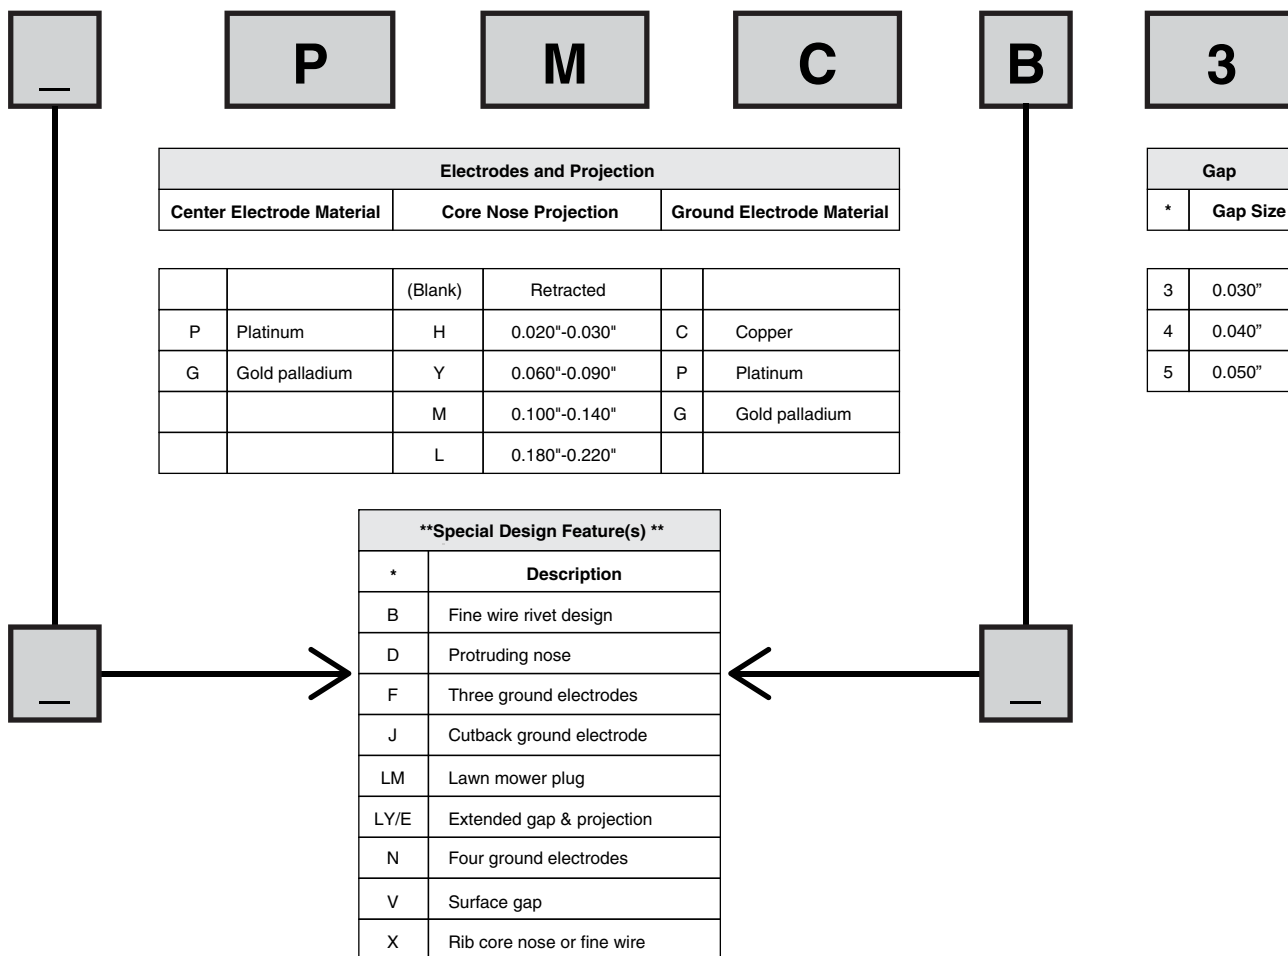

Please note, within a given plug family, the plugs run hotter as the number gets higher. Generally, the industrial family's plugs run colder than automotive family's even though they have higher numbers.

RJ19LM

- R** Resistor
J M14 x 1.25 thread, .375" thread reach, gasketed seat, 13/16" hex
19 Heat range (automotive & small engine)

L
M — LM = lawn mower plug

*** Some plugs have special design features. If the first character after the heat range (number) is NOT one of the center electrode references, check the Special Design Feature(s) matrix.

LM	14 mm (especial para cortadoras de césped)	3/8"	13/16"
LY/E	Separación de electrodo ampliada y punta de núcleo saliente		

Important Information regarding resistor plugs and proper plug selection

For more than 30 years, small engine manufacturers have come to rely on Champion resistor style spark plugs to protect against disruptive EMI and RFI emissions.

Electro-magnetic interference (EMI) and radio frequency interference (RFI) are two forms of high-frequency electrical energy. These violent bursts of energy are a natural occurrence created every time a spark plug fires. Left unchecked, these electronic emissions can upset the intended operation of sensitive nearby electronics (like cell phones, walkie-talkies and radios). In some cases, EMI/RFI emissions can even cause a noticeable decrease in engine performance.

Spark plug resistors are used to control these interfering emissions. Champion produced its first suppressed spark plug in 1931. Since then our engineers have designed a variety of resistor types in order to deliver the highest levels of EMI/RFI control.

“SAC-9” resistors are made of a proprietary blend of finely ground metal powders, each chosen for their specific resistive characteristics. All Champion plug types that begin with the letter “R” (RJ19LM for example) are built with the SAC-9 style resistor.

“Q” resistors use a small wire-wound component called an inductive suppressor. All Champion plug types that begin with the letter “Q” (QL76V for example) are built with this inductive suppressor.

“X” resistors use both “SAC-9” and “Q” resistor/suppressor technology. All Champion plug types that begin with the letter “X” (XC12YC for example) are built with this combined resistor/suppressor technology, providing the highest level of EMI/RFI protection.

NOTE: Many marine applications utilize Capacitive Discharge or “CD” style ignition systems. Because of how CD ignition systems work, resistance found in the spark plug can greatly diminish the performance of CD ignition systems. Champion “Q” inductive suppressors effectively manage RFI/EMI without hurting CD ignition performance because of its low resistance characteristics. Modern marine applications utilize a high amount of sensitive onboard electronics like depth finders, fish finders, GPS and ship to shore radios. Maximum protection against unwanted electrical interference should always be considered.

NOTE: Non-resistor spark plugs should NOT be used in any application where a resistor style spark plug has been required by the manufacturer.

799876

RJ2YXLE

RJ2PYLE

Champion Plug Number

868 / 868LMC

868-1 / 868-LMC1

The 868LMC is the same as the 868 but contains greater copper content. The copper aids in combustion heat transfer & helps reduce occurrence of "after-bang". After-bang is a potentially damaging pre-ignition condition that often surfaces as a back-fire like sound that occurs as the engine shuts off and winds down to a full and complete stop.

This is for reference ONLY : For model specific coverage , please see the Briggs & Stratton listings under the "Lawn & Garden" and "Power Equipment" segments of this catalog.

**Note: This chart denotes the heat ranges for the small engine spark plugs listed in this specific catalog. Please consult the Champion #1015 automotive master catalog for additional part number									

SPARK PLUG REMOVAL & INSTALLATION

After the normal service life of a spark plug, one or more of the plugs may be a little difficult to loosen. Allowing the engine ample cool-down time will facilitate plug removal. The use of penetrating oil is also recommended if the plug appears to be dangerously tight. Apply steady pressure with a plug wrench until the plug loosens. Before removing the plug, blow any dirt from the port area that might be present to prevent it from falling into the combustion chamber. If the plug appeared to be overly tight when removed by hand, it may be due to carbon collection in the threaded area of the cylinder head. This condition is common in older engines. The threads should be cleaned with a chaser tool, and the seat wiped clean to assure good seat contact before installing a new plug.

Use the Champion torque recommendation below as a guide for tightening all spark plugs.

DÉPOSE ET POSE DES BOUGIES

Après une durée normale de service, il est possible qu'une ou plusieurs bougies soient difficiles à desserrer. Laisser le moteur se refroidir suffisamment peut alors faciliter la dépose des bougies. L'utilisation d'une huile pénétrante est également recommandée si la bougie semble dangereusement serrée. Appliquer une pression constante avec une clé à bougie jusqu'à ce que la bougie se desserre. Avant de la retirer, enlever toute trace de saleté autour de son orifice pour empêcher qu'elle ne contamine la chambre de combustion. Si une bougie enlevée à la main semblait trop serrée, il est possible qu'il y ait un dépôt de carbone dans le filetage du couvercle de culasse. Ce problème est commun sur les anciens modèles de moteur. Le filetage doit alors être nettoyé à l'aide d'une filière, et le siège doit être essuyé avec soin pour lui assurer un bon contact avant d'installer une nouvelle bougie.

Utiliser le guide de serrage Champion ci-dessous recommandé pour toutes les bougies Champion.

DESMONTAJE E INSTALACIÓN DE BUJÍAS

Después de la duración de servicio normal de una bujía, es posible que sea difícil aflojar una o más bujías. Se debe dejar que el motor se enfríe durante un largo tiempo para facilitar el desmontaje de las bujías. También se recomienda usar aceite penetrante si la bujía parece estar peligrosamente apretada. Ejercer una presión constante con una llave para bujías hasta que se afloje la bujía. Antes de quitar la bujía, limpie la suciedad que pueda haber presente en el área del orificio para impedir que entre en la cámara de combustión. Si la bujía parece estar demasiado apretada cuando se quita con la mano, puede deberse a la acumulación de carbón en el área roscada de la cabeza del cilindro. Esto es común en los motores más antiguos. Se deben limpiar las roscas con un peine de roscar, y el asiento debe limpiarse para asegurar un buen contacto antes de instalar una bujía nueva.

Use la siguiente recomendación de apriete de Champion como guía para apretar todas las bujías.

	TAPERED SEAT PLUGS	BOUGIES À SIÈGE CONIQUE	BUJÍAS DE ASIENTO CÓNICO
	Finger Tight. Install the new plug finger tight, and complete the installation with a plug wrench.	Serrer avec les doigts. Installer les nouvelles bougies à la main, puis compléter l'installation à l'aide d'une clé pour bougie.	Apretada a mano. Instale la nueva bujía apretándola con la mano, y complete la instalación con una llave para bujías.
	Turn Finger Tight. A tapered seat plug does not use gaskets and requires about one-sixteenth (1/16) turn.	Serrer avec les doigts. Une bougie à siège conique ne comporte pas de joints et nécessite environ 1/16 de tour.	Giro con la mano. Las bujías cónicas no usan empaquetaduras y requieren aproximadamente un dieciseisavo (1/16) de vuelta.
	GASKET TYPE PLUGS	BOUGIES DE TYPE À JOINT	BUJÍAS TIPO EMPAQUETADURA
	Turn Finger Tight. A new or reinstalled plug with a new gasket will require 3/8–5/8 turn to effect a gas tight seal depending on head material. (See below).	Serrer avec les doigts. Une bougie neuve ou réinstallée avec un nouveau joint nécessitera 3/8–5/8 de tour pour composer un joint de gaz étanche, selon le matériau de la culasse (Voir ci-dessous).	Giro con la mano. Una bujía nueva o vuelta a instalar con una empaquetadura nueva requiere de 3/8–5/8 de vuelta para lograr una estanqueidad al gas dependiendo del material de la cabeza. (Vea abajo).
	1/4 Turn Finger Tight. For reinstalled plugs with used gasket only a 1/4 turn is required for gas tight seal for both cast iron and aluminum.	Serrer avec les doigts. Pour les bougies réinstallées avec le vieux joint, seulement 1/4 de tour est requis pour composer un joint de gaz étanche, autant pour la fonte moulée que pour l'aluminium.	Giro con la mano de 1/4 de vuelta. Para bujías vueltas a instalar con empaquetadura usada solamente se requiere 1/4 de vuelta para lograr una estanqueidad al gas para hierro colado y aluminio.

TORQUE RECOMMENDATIONS RECOMMANDATIONS DE SERRAGE RECOMENDACIONES DE APRIETE	SPARK PLUG THREAD SIZE	GASKET PART NO.	CAST IRON HEADS		ALUMINUM HEADS	
			WITH TORQUE WRENCH	WITHOUT TORQUE WRENCH	WITH TORQUE WRENCH	WITHOUT TORQUE WRENCH
GASKET TYPE*	10mm	Y678	8-12 lb.ft.	1/4 Turn	8-12 lb.ft.	1/4 Turn
	12mm	P678	10-18 lb.ft.	1/4 Turn	10-18 lb.ft.	1/4 Turn
	14mm	N678	26-30 lb.ft.	1/2 to 5/8 Turn	18-22 lb.ft.	3/8 to 1/2 Turn
	18mm	A678	32-38 lb.ft.	1/2 to 5/8 Turn	28-34 lb.ft.	3/8 to 1/2 Turn
	7/8"	A478	50-55 lb.ft.	1/2 to 5/8 Turn	—	—
TAPERED SEAT	14mm	—	7-15 lb.ft.	1/16 Turn (Snug)	7-15 lb.ft.	1/16 Turn (Snug)
	18mm	—	15-20 lb.ft.	1/16 Turn (Snug)	15-20 lb.ft.	1/16 Turn (Snug)

*Torque recommendations are for new gaskets.

*Les recommandations de serrage concernent les nouveaux joints d'étanchéité.

*Las recomendaciones de apriete son para empaquetaduras nuevas.

COMBUSTION

COMBUSTION CONDITIONS

Normal

Power delivered by an internal combustion engine is developed by the expanding gases which result from the burning of the air/fuel charge. If spark timing is proper and the quality of the fuel meets the engine requirements, then the burning process should progress in a steady, even flame front (Figure 4).

COMBUSTION

CONDITIONS DE COMBUSTION

Normale

La puissance fournie par un moteur à combustion interne est formée par les gaz en expansion qui résultent de la combustion de la charge air-carburant. Si la distribution de l'allumage est correcte et que la qualité du carburant répond aux exigences du moteur, le processus de combustion devrait progresser de manière à former une flamme uniforme et égale (figure 4).

COMBUSTIÓN

CONDICIONES DE LA COMBUSTIÓN

Normal

La potencia suministrada por un motor de combustión interna es producida por la expansión de los gases resultantes de la combustión de la carga de aire/combustible. Si la sincronización de la chispa es apropiada y la calidad del combustible cumple con el requisito del motor, entonces el proceso de combustión debe avanzar rápidamente, en un frente de llama uniforme (Figura 4).

Figure 4

- B.** Empieza la combustión
- C.** Continúa rápidamente
- D.** Y se completa

Detonation

Detonation occurs when a portion of the air/fuel charge begins to burn spontaneously from increased heat and pressures just after ignition. In Figure 5, the instantaneous combustion of the fuel charge and resulting shockwave applies extreme hammering pressures on the piston and other engine parts. Piston damage occurs from the pounding pressures of severe detonation, and the increased heat factor can cause preignition.

Détonation

La détonation survient lorsqu'une portion de la charge air-carburant commence à se consumer spontanément en raison de la chaleur et des pressions accrues juste après l'allumage. Dans la figure 5, la combustion instantanée du carburant et l'onde de choc qui en résulte oppose des pressions de martèlement sur le piston et les autres pièces du moteur. Les dommages des pistons sont causés par les martèlements qu'entraînent les fortes détonations, et l'augmentation de la chaleur qui en résulte peut causer le préallumage.

Detonación

La detonación se produce cuando parte de la carga de aire/combustible empieza a quemarse espontáneamente debido a las mayores temperaturas y presiones justo después del encendido. En la Figura 5, la combustión instantánea de la carga de combustible y la onda de choque resultante ejerce unas presiones de golpeteo extremas sobre el pistón y demás piezas del motor. Los pistones se dañan debido a las presiones de golpeteo de la fuerte detonación, y el mayor factor de temperaturas puede causar un encendido prematuro.

Figure 5

Figure 5

- A.** Formation de l'étincelle
- B.** La combustion débute
- C.** Combustion instantanée du carburant résiduel
- D.** Augmentation de pression/onde de choc cause des dommages mécaniques

Figura 5

- A.** Se produce la chispa
- B.** Empieza la combustión
- C.** Combustión instantánea de la carga de combustible restante
- D.** Aumento de presión/onda de choque causan daños mecánicos

Detonation is usually the result of any of the following conditions:

- ☐ Ignition timing advanced too far;
- ☐ Fuel octane rating too low;
- ☐ Lean mixtures—poor fuel distribution and/or leaks in manifolds-crankcase and/or air intake system;
- ☐ Compression ratio increase due to accumulation of combustion chamber deposits or a modification made to the engine;
- ☐ Excessive intake manifold temperatures;
- ☐ Lugging the engine.

Detonation can seriously overheat spark plugs (Figure A). In addition, the high frequency shock waves associated with severe detonation may mechanically damage the plug either by insulator fracture or by eventual ground electrode breakage.

La détonation est généralement le résultat de l'une ou l'autre des conditions suivantes :

- ☐ Avance à l'allumage exagérée;
- ☐ Indice d'octane du carburant trop faible;
- ☐ Mélanges pauvres—distribution de carburant pauvre ou fuites dans le carter ou les collecteurs ou le système d'admission d'air;
- ☐ Augmentation du taux de compression résultant de l'accumulation de dépôts dans les chambres de combustion ou d'une modification apportée au moteur;
- ☐ Températures exagérées dans le collecteur d'admission;
- ☐ Surcharge du moteur.

La détonation peut surchauffer gravement les bougies d'allumage (figure A). De plus, les ondes de choc à haute fréquence associées une forte détonation peut causer des dommages mécaniques aux bougies, soit en fracturant l'isolant ou, à la longue, en provoquant le bris de l'électrode de masse.

La detonación se debe normalmente a cualquiera de las condiciones siguientes:

- ☐ Sincronización de encendido demasiado avanzada;
- ☐ Octanaje de combustible demasiado bajo;
- ☐ Mezclas pobres—distribución de combustible deficiente y fugas en múltiples-cárter y sistema de admisión de aire;
- ☐ La relación de compresión aumenta debida a la acumulación de depósitos en la cámara de combustión o una modificación efectuada en el motor;
- ☐ Temperaturas excesivas del múltiple de admisión;
- ☐ Sobrecarga del motor.

La detonación puede recalentar seriamente las bujías (Figura A). Además, las ondas de choque de alta frecuencia asociadas con la fuerte detonación puede dañar mecánicamente la bujía, ya sea por fractura del aislador o por rotura del electrodo de tierra con el tiempo.

COMBUSTION cont.

COMBUSTION suite

COMBUSTIÓN cont.

Severe pressures and temperatures associated with detonation can also be extremely harmful to pistons, valves, bearings and other engine components.

Preignition

Preignition, the ignition of the air/fuel charge prior to the timed spark (Figure 7), will generally cause a very rapid and severe rise of the spark plug operating temperature and other combustion chamber components (Figure B). Any hot spot in the combustion chamber can cause preignition. Preignition can damage the engine and spark plugs.

Preignition is usually the result of any of the following conditions:

- ☐ Combustion chamber deposits which become incandescent;
- ☐ Hot spots in the combustion chamber due to poor heat dissipation into the cooling system;
- ☐ Scuffing due to inadequate lubrication or improper clearance between engine parts,
- ☐ Detonation or an engine operating condition leading to it;
- ☐ Head gasket protrusion into the combustion chamber—thin edges on valves in 4-cycle engines;
- ☐ Cross firing—electrical induction between spark plug wires;
- ☐ Spark plug heat range too hot for the engine's operating condition.

On occasion, even if the original source of preignition, such as deposits, disappears from the engine, the plug or some other combustion chamber component may be overheated to the extent that it will sustain preignition.

Les pressions et les températures intenses associées à la détonation peuvent également être extrêmement néfastes pour les pistons, les soupapes, les paliers et d'autres composantes du moteur.

Préallumage

Le préallumage, c'est-à-dire l'allumage du mélange air-carburant avant la formation prévue de l'étincelle (figure 7), entraîne généralement une augmentation rapide et intense de la température de fonctionnement des bougies et des autres composantes des chambres de combustion (figure B). Tout point chaud dans la chambre de combustion peut provoquer le préallumage. Le préallumage peut endommager le moteur et les bougies.

Le préallumage est habituellement le résultat de l'une ou l'autre des causes suivantes :

- ☐ Dépôts qui deviennent incandescents dans les chambres de combustion;
- ☐ Points chauds dans les chambres de combustion, en raison d'une piètre dissipation de la chaleur dans le système de refroidissement;
- ☐ Rayures causées par un manque de lubrification ou un dégagement incorrect entre les pièces du moteur;
- ☐ Détonation ou moteur appelé à fonctionner dans des conditions qui la favorisent;
- ☐ Saillie du joint de culasse dans les chambres de combustion—rebords minces sur les soupapes des moteurs à 4 temps;
- ☐ Allumage à contretemps—induction électrique entre les câbles de bougie;
- ☐ Gamme de chaleur des bougies trop élevée pour les conditions de fonctionnement du moteur.

À l'occasion, même si la source originale de préallumage, comme les dépôts, se résorbe, la bougie et d'autres composantes des chambres de combustion peuvent être surchauffées à un point tel que le problème de préallumage persiste.

Las presiones y temperaturas fuertes asociadas con la detonación pueden ser muy dañinas para las válvulas de los pistones, cojinetes y otros componentes del motor.

Encendido prematuro

El encendido prematuro, el encendido de la carga de aire/combustible antes de la chispa sincronizada (Figura 7), causará generalmente un aumento muy rápido y grande de la temperatura de operación de la bujía y otros componentes de la cámara de combustión (Figura B). Cualquier punto caliente de la cámara de combustión puede causar un encendido prematuro. El encendido prematuro puede dañar el motor y las bujías.

El encendido prematuro normalmente es consecuencia de cualquiera de las condiciones siguientes:

- ☐ Depósitos incandescents de la cámara de combustión;
- ☐ Puntos calientes en la cámara de combustión debido a una disipación deficiente del calor en el sistema de enfriamiento;
- ☐ Restregaduras debido a la lubricación inadecuada u holgura indebida entre piezas del motor;
- ☐ Detonación o condición de operación de un motor que conduce a la detonación;
- ☐ Empaquetadura de la culata que sobresale dentro de la cámara de combustión—bordes finos en la válvulas de los motores de 4 tiempos;
- ☐ Encendido por inducción—inducción eléctrica entre los cables de las bujías;
- ☐ La gama de temperaturas de la bujía es demasiado alta para la condición de operación del motor.

A veces, incluso si desaparece del motor la fuente original del encendido prematuro, tales como los depósitos, la bujía o algún componente de la cámara de combustión puede recalentarse hasta el punto que sostenga el encendido prematuro.

2 & 4 CYCLE ENGINE TROUBLESHOOTING GUIDE

This guide provides an introduction into used spark plug analysis and diagnostic procedures for 2 & 4 cycle engines. It examines the three primary areas necessary for the proper operation of any engine: fuel delivery, ignition and mechanical functions.

Since the spark plug is an ignition system component and is located within the combustion chamber, it is an excellent tool for diagnosing engine problems. Though spark plugs themselves are rarely the cause of the problem, they do interact with fuel delivery, spark delivery and mechanical functions. Examination of the spark plugs can sometimes give a physical clue to the underlying cause.

HOW TO USE THE GUIDE

- Your problem engine is 2-cycle.
- Your problem is *idles poorly*.
- Using the 2-cycle chart, locate "idles poorly" on the vertical symptom column. At each dot in the horizontal column, consider the *possible cause*. In this example, *idles poorly* reveals possible cause in four areas: #3 improper fuel/air ratio, #6 ignition system, #10 low compression, #14 exhaust restriction.
- Locate each *possible cause*, consider and check each item.

GUIDE DE DÉPANNAGE-MOTEURS À 2 ET À 4 TEMPS

Ce guide sert d'introduction aux procédures d'analyse et de diagnostic des bougies usées des moteurs à 2 et à 4 temps. Il traite des trois principaux facteurs de bon fonctionnement du moteur : l'alimentation en carburant, l'allumage et les fonctions mécaniques.

Comme la bougie d'allumage est une composante du système d'allumage et qu'elle est située dans la chambre de combustion, elle constitue un excellent outil pour diagnostiquer les problèmes de moteur. Bien que les bougies soient rarement elles-mêmes la cause du problème, elles interagissent avec l'alimentation en carburant, l'allumage et les fonctions mécaniques. Par conséquent, l'examen des bougies peut parfois donner des indices physiques des causes sous-jacentes d'un problème.

MODE D'UTILISATION DU GUIDE

- Le problème provient d'un moteur à 2 temps.
- Il s'agit d'un problème de ralenti irrégulier.
- Dans le tableau relatif aux moteurs à 2 temps, repérer « ralenti irrégulier » dans la colonne verticale de symptômes. Considérer la cause possible pour chaque point figurant dans la colonne horizontale. Dans cet exemple, ralenti irrégulier révèle quatre causes possibles : n° 3 rapport air/carburant incorrect, n° 6 système d'allumage, n° 10 faible taux de compression et n° 14 restriction de l'échappement.
- Trouver chaque cause possible, puis considérer et vérifier chacun des points.

GUÍA PARA AVERÍAS DE MOTORES DE 2 Y 4 TIEMPOS

Esta guía contiene una introducción del análisis de bujías y procedimiento de diagnóstico para motores de 2 y 4 tiempos. Examina las tres áreas principales necesarias para la operación apropiada en cualquier motor: suministro de combustible, encendido y funciones mecánicas.

Como la bujía es un componente del sistema de encendido y está ubicada dentro de la cámara de combustión, es una herramienta excelente para diagnosticar problemas del motor. Aunque las bujías mismas raramente son la causa del problema, tienen que ver con el suministro de combustible, la producción de chispas y las funciones mecánicas. El examen de las chispas a veces puede dar una pista física de la causa del problema.

CÓMO USAR ESTA GUÍA

- El motor con problemas es un motor de 2 tiempos.
- El problema es que funciona en vacío de forma deficiente.
- Usando la tabla de 2 tiempos, localice "funciona en vacío de forma deficiente" en la columna de síntomas vertical. En cada cuadrado de la columna horizontal, tenga en cuenta la Causa posible, en este ejemplo, funciona en vacío de forma deficiente, apunta a la causa posible en cuatro áreas No. 3 Relación indebida de combustible/aire, No. 6 Sistema de encendido, No. 10 Baja compresión, No. 14 Restricción del escape.
- Localice cada causa posible, tenga en cuenta y compruebe cada uno de los apartados.

TROUBLESHOOTING GUIDE *cont.*

GUIDE DE DÉPANNAGE *suite*

GUÍA PARA AVERÍAS *cont.*

POSSIBLE CAUSES

- 1. No fuel**
 - tank empty;
 - fuel shut-off valve;
 - filler cap vent plugged;
 - filter or delivery lines clogged;
 - fuel pump faulty;
 - carburetor needle & seat inoperative.
- 2. Improper fuel**
 - stale fuel;
 - water in fuel tank;
 - octane rating too low;
 - 2-cycle oil not to engine manufacturer's specs;
 - contaminated fuel.
- 3. Improper fuel/air ratios**
 - choke operation;
 - improper carburetion settings and adjustments;
 - restricted air intake, dirty air cleaner;
 - dirty carburetion, restricted internally, carburetion icing;
 - air leak in intake system;
 - damaged head gasket or cracked head or cylinder;
 - leaking crankcase seals (2-cycle);
 - engine flooded;
 - dirty fuel filter;
 - defective fuel pump.
- 4. Improper oil or fuel-oil ratio**
 - improper mix;
 - fuel/oil separation;
 - main bearing seal leaking
 - (2-cycle-if main is pressure fed).
- 5. No spark**
 - ignition switch off;
 - wiring in primary or secondary circuit disconnected, broken, or corroded;
 - contact breakers stuck or oxidized;
 - coil and condenser faulty;
 - battery condition;
 - ignition module;
 - poor or loose connections.
- 6. Ignition system**
 - faulty ignition switch;
 - broken, damaged, or corroded wire (abnormally high resistance);
 - ignition timing wrong;
 - wrong spark plug gap;
 - bad ignition coil;
 - faulty spark plug wire.
- 7. Battery condition**
 - low voltage—inadequate charge;
 - internal short circuit;
 - corrosion;
 - poor or loose connections;
 - faulty starter;
 - faulty starter solenoid;
 - lack of battery fluid.
- 8. Improper cooling**
 - restriction in cooling system or fins;
 - lack of coolant;
 - cooling fin damage;
 - blown head gasket.
- 9. Improper lubrication**
 - out of oil;
 - improper oil;
 - improper fuel/oil ratio (2-cycle);
 - oil gauge defective.
- 10. Low or loss of compression**
 - cracked or broken piston rings;
 - blown head gasket or cracked cylinder or head;
 - valve sticking or broken push rod;
 - preignition damage;
 - detonation damage.

CAUSES POSSIBLES

- 1. Pas de carburant**
 - réservoir vide;
 - vanne d'arrêt de carburant;
 - évent du bouchon de remplissage obstrué;
 - filtre ou canalisations d'alimentation bouchées;
 - pompe à carburant défectueuse;
 - siège et pointeau de carburateur inopérants.
- 2. Carburant incorrect**
 - carburant vicié;
 - présence d'eau dans le réservoir;
 - indice d'octane trop faible;
 - huile 2 temps qui ne respecte pas les spécifications du fabricant du moteur;
 - carburant contaminé.
- 3. Rapports air-carburant incorrects**
 - fonctionnement de l'étrangleur;
 - réglages et ajustements de carburation incorrects;
 - admission d'air restreinte, filtre à air sale;
 - carburation sale, restriction interne, givrage de carburation;
 - fuite d'air dans le système d'admission;
 - joint de culasse endommagé, culasse ou cylindre fissuré;
 - fuite des joints de carter (2 temps);
 - moteur noyé;
 - filtre à carburant sale;
 - pompe à carburant défectueuse.
- 4. Huile ou rapport huile-carburant incorrect**
 - dosage incorrect;
 - séparation huile/carburant;
 - fuite des joints de paliers principaux
 - (2 temps-si alimenté sous pression).
- 5. Absence d'allumage**
 - contact d'allumage à off;
 - filage du circuit primaire ou secondaire débranché, brisé ou corrodé;
 - coupe-circuit coincé ou oxydé;
 - bobine et condensateur défectueux;
 - état de la batterie;
 - module d'allumage;
 - branchements lâches ou incorrects.
- 6. Système d'allumage**
 - contact d'allumage défectueux;
 - fil brisé, endommagé ou corrodé (résistance anormalement haute);
 - mauvaise distribution de l'allumage;
 - écartement incorrect des bougies;
 - bobine d'allumage défectueuse;
 - câble d'allumage défectueux.
- 7. État de la batterie**
 - faible tension-charge inadéquate;
 - cour-circuit interne;
 - corrosion;
 - branchements lâches ou incorrects;
 - démarrateur défectueux;
 - solénoïde de démarrage défectueux;
 - manque de liquide dans la batterie.
- 8. Refroidissement incorrect**
 - restriction dans le systèmes de refroidissement ou les ailettes;
 - manque de liquide de refroidissement;
 - ailettes de refroidissement endommagées;
 - joint de culasse brisé.
- 9. Lubrification incorrecte**
 - absence d'huile;
 - huile incorrecte;
 - rapport huile-carburant incorrect (2 temps);
 - indicateur de niveau d'huile défectueux.
- 10. Faible taux ou perte de compression**
 - segments de piston fissurés ou brisés;
 - joint de culasse brisé, cylindre ou culasse fissuré;
 - soupape saisie ou poussoir brisé;
 - dommages causés par le préallumage;
 - dommages causés par la détonation.

CAUSAS POSIBLES

- 1. No hay combustible**
 - tanque vacío;
 - válvula de corte de combustible;
 - respiradero de la tapa de llenado taponado;
 - filtro o tuberías de suministro obstruidas;
 - bomba de combustible defectuosa;
 - aguja y asiento del carburador inoperativos
- 2. Combustible indebido**
 - combustible viejo;
 - agua en el tanque de combustible;
 - octanaje demasiado bajo;
 - el aceite de 2 tiempos no cumple con las especificaciones del fabricante;
 - combustible contaminado.
- 3. Relaciones indebidas de combustible/aire**
 - operación del estrangulador;
 - ajustes indebidos de carburación;
 - admisión de aire obstruida, filtro de aire sucio;
 - carburación sucia, obstrucción interna, formación de escarcha en el carburador;
 - fuga de aire en el sistema de admisión;
 - empaquetadura de culata dañada o culata o cilindro rajado;
 - fugas en las juntas del cárter (2 tiempos);
 - motor anegado;
 - filtro de combustible sucio;
 - bomba de combustible defectuosa.
- 4. Aceite o relación de combustible-aceite indebida**
 - mezcla indebida;
 - separación de combustible/aceite;
 - fugas de los sellos de los cojinetes de bancada;
 - (2 tiempos-si el tubo principal se alimenta a presión).
- 5. No se producen chispas**
 - interruptor de encendido en la posición de apagado;
 - cables desconectados, rotos o corroídos en el circuito primario o secundario;
 - disyuntors de contactos agarrotados u oxidados;
 - serpentin y condensador defectuosos;
 - estado de la batería;
 - módulo de encendido;
 - conexiones deficientes o sueltas.
- 6. Sistema de encendido**
 - interruptor de encendido defectuoso;
 - cable roto, dañado o corroído (resistencia anormalmente alta);
 - sincronización de encendido equivocada;
 - distancia entre puntas equivocada;
 - bobina de encendido defectuosa;
 - cable de bujía defectuoso.
- 7. Estado de la batería**
 - bajo voltaje - carga inadecuada;
 - cortocircuito interno;
 - corrosión;
 - conexiones deficientes o sueltas;
 - motor de arranque defectuoso;
 - solenoide defectuoso del motor de arranque;
 - falta de fluido de baterías.
- 8. Enfriamiento indebido**
 - restricción en el sistema de enfriamiento o aletas;
 - falta de refrigerante;
 - daños en las aletas de enfriamiento;
 - empaquetadura de culata reventada.
- 9. Lubricación indebida**
 - falta de aceite;
 - aceite indebido;
 - relación indebida de combustible/aceite (2 tiempos);
 - indicador de aceite defectuoso.
- 10. Baja compresión o falta de compresión**
 - aros de pistón rajados o rotos.
 - empaquetadura de culata reventada o cilindro o culata rajada;
 - válvula agarrotada o varilla de empuje rota;
 - daños de encendido prematuro;
 - daños de detonación.

TROUBLESHOOTING GUIDE <i>cont.</i>	GUIDE DE DÉPANNAGE <i>suite</i>	GUÍA PARA AVERÍAS <i>cont.</i>
<p>11. Carbon build-up -normal accumulation; -excessive rich mixtures; -excessive fuel/oil ratios; -incorrect oil type.</p> <p>12. Faulty governors -governor assembly malfunctioning; -linkage out of adjustment; -linkage worn or disconnected; -governor spring sensitivity too great; -linkage binding.</p> <p>13. Engine overload -engine operated in conditions above those for which designed.</p> <p>14. Exhaust restriction -damaged exhaust system; -clogged or restricted baffles; -clogged or restricted exhaust port.</p> <p>15. Valve problems -improper adjustment in lash; -improper seating due to burned, bent or stuck valve; -broken valve spring; -valve or valve seal leaking.</p>	<p>11. Dépôts de carbone -accumulation normale; -mélanges excessivement riches; -rapports huile-carburant exagérés; -mauvais type d'huile.</p> <p>12. Régulateurs défectueux -mauvais fonctionnement de l'assemblage de régulateur; -tringlerie déréglée; -tringlerie usée ou débranchée; -ressort de régulateur trop sensible; -tringlerie saisie.</p> <p>13. Surcharge du moteur -moteur appelé à fonctionner dans des conditions pour lesquelles il n'est pas conçu.</p> <p>14. Restriction de l'échappement -système d'échappement endommagé; -chicanes bouchées ou restreintes; -orifices d'échappement bouchés ou restreints.</p> <p>15. Problèmes de soupapes -mauvais réglage du jeu des soupapes; -calage inadéquat en raison d'une soupape brûlée, courbée ou saisie; -siège de ressort brisé; -fuite d'une soupape ou d'un joint de soupape.</p>	<p>11. Acumulación de carbón -acumulación normal; -mezclas excesivas ricas; -relaciones excesivas de combustible/aceite; -tipo de aceite incorrecto.</p> <p>12. Reguladores defectuosos -funcionamiento defectuoso del conjunto de regulador; -articulación desajustada; -articulación desgastada o desconectada; -demasiada sensibilidad del resorte del regulador; -agarrotamiento de la articulación.</p> <p>13. Sobrecarga del motor -motor operado en condiciones más exigentes que las condiciones para las que se ha diseñado.</p> <p>14. Obstrucción del escape -sistema de escape dañado; -deflectores obstruidos o taponados; -orificio de escape obstruido o taponado.</p> <p>15. Problemas de las válvulas -ajuste indebido de la luz de las válvulas; -asentamiento inadecuado debido a válvulas quemadas, dobladas o agarrotadas; -resorte de válvula roto; -fugas de válvula o de sellos de válvula.</p>
CHAMPION'S SUPPRESSORS AND RFI	LES SUPPRESSEURS CHAMPION ET IFR	LOS SUPRESORES DE CHAMPION Y LAS INTERFERENCIAS DE RADIOFRECUENCIA
<p>CHAMPION RESISTORS Radio Frequency Interference (RFI) Each time the spark jumps across a gap, an electromagnetic field (EMI) is created that can affect on-board computer systems, AM and FM radio reception, TV broadcasts and even airplane communications. By placing a resistor in the spark plug, we can substantially reduce this radio frequency interference (RFI). By comparison, it wasn't until recent years that small engine manufacturers began using resistance to suppress RFI. By contrast automotive engines have been using resistance spark plugs for over 40 years (in computer equipped vehicles it is imperative that resistor plugs are used to prevent driveability problems, loss of performance and even cause false trouble codes).</p> <p>Champion manufactured its first suppressor-type spark plugs in 1931. Today Champion uses several types of suppressors to reduce RFI.</p>	<p>LES RÉSIDENCES ANTIPARASITE CHAMPION Les Parasites radioélectriques Chaque fois qu'une étincelle franchit un écartement, un champ électromagnétique (EMI) se crée, pouvant nuire aux ordinateurs de bord, à la réception des ondes radio AM et FM, aux ondes de télévision et même aux communications des avions. En plaçant une résistance dans la bougie, on arrive à réduire considérablement ces parasites radioélectriques. Ce n'est qu'il y a quelques années que les fabricants de petites cylindrées ont commencé à utiliser la résistance pour supprimer les parasites radioélectriques (RFI). Par contre, les moteurs des automobiles sont dotés de bougies à résistance depuis plus de 40 ans (dans les véhicules munis d'ordinateurs, l'utilisation de bougies à résistance est impérative afin de prévenir les problèmes de fonctionnement, la perte de performance et les faux codes d'anomalie).</p> <p>Champion a fabriqué sa première bougie à résistance en 1931. Aujourd'hui, Champion utilise plusieurs types de suppresseurs de parasites pour réduire les parasites radioélectriques.</p>	<p>RESISTORES CHAMPION Interferencias de radiofrecuencia Cada vez que salta una chispa entre las puntas de los electrodos se forma un campo electromagnético que puede afectar los sistemas de computadoras interiores, la recepción de radio de AM y FM, las retransmisiones de TV e incluso las comunicaciones con aviones. Al poner un resistor en la bujía, podemos reducir sustancialmente estas interferencias de radiofrecuencia. No fue hasta recientemente que los fabricantes de motores pequeños empezaron a usar resistencias para suprimir estas interferencias. Por el contrario, los motores automotrices han venido usando bujías con resistencia durante más de 40 años (en vehículos equipados con computadoras es esencial que se usen bujías con resistores para impedir los problemas de capacidad de conducción, pérdida de rendimiento e incluso códigos de falla falsos).</p> <p>Champion fabricó sus primeras bujías tipo supresión en 1931. Hoy Champion usa varios tipos de supresores para reducir estas interferencias.</p>
<p>SAC-9 Suppressor Champion developed the SAC-9 suppressor in the early 1980's. This extremely reliable resistor/suppressor is formed from strontium carbonate, aluminum oxide and copper oxide powders. In fact, out of billions made, not a single SAC-9 suppressor has ever been found to fail in service. They are used in many Champion "R" type resistor plugs. An important feature of Champion plugs with the SAC-9 suppressor is that the resistance of the plug cannot be accurately measured with typical low voltage ohmmeters.</p> <p><i>An example of a Champion SAC-9 Small Engine Plug would be the RJ19LM.</i></p>	<p>Suppresseur SAC-9 Champion a mis au point le suppresneur SAC-9 au début des années 1980. Cette résistance/suppresneur extrêmement fiable se compose de poudres de carbonate de strontium, d'oxyde d'aluminium et d'oxyde de cuivre. En fait, sur les milliards de suppressseurs fabriqués, aucun suppresneur SAC-9 n'a jamais fait défaut. Ces suppressseurs sont utilisés dans bon nombre de bougies à résistance de type "R" Champion. L'une des caractéristiques importantes des bougies Champion à suppresneur SAC-9 est que la résistance ne peut être mesurée avec précision au moyen d'un ohmmètre ordinaire à faible tension.</p> <p><i>Un bon exemple d'une bougie pour petite cylindrée Champion SAC-9 : la bougie RJ19LM.</i></p>	<p>Supresor SAC-9 Champion desarrolló el supresor SAC-9 a principios de los 80. Este resistor/supresor de gran fiabilidad está formado por polvos de carbonato de estroncio, óxido de aluminio y óxido de cobre. De hecho, de los miles de millones que se han fabricado, no se ha encontrado un solo supresor SAC-9 que haya fallado durante el servicio. Se usan en muchas bujías de resistores tipo "R" de Champion. Una característica importante de las bujías Champion con supresor SAC-9 es que la resistencia de la bujía no puede medirse con ohmímetros típicos de bajo voltaje.</p> <p><i>Un ejemplo de una bujía de motores pequeños con supresor SAC-9 sería la RJ19LM.</i></p>
<p>"Q" Type Inductive Suppressors Today more Small Engine manufacturers are using "Q" Type spark plugs for their ability to control RFI while maintaining adequate spark output levels. The "Q" type plug is primarily designated for high performance, capacitive discharge (CD) ignition systems, where spark output can be greatly</p>	<p>Suppresneur à induction de type Q Aujourd'hui, de plus en plus de fabricants de petites cylindrées utilisent des bougies de type Q en raison de leur capacité de contrôler les parasites radioélectriques tout en maintenant des niveaux de puissance d'allumage adéquats. La bougie de type Q est principalement conçue pour les systèmes d'allumage à décharge capacitive de haute</p>	<p>Supresores inductores tipo "Q" Hoy hay más fabricantes de motores pequeños que usan bujías tipo "Q" por su capacidad de controlar las interferencias de radiofrecuencia a la vez que por mantener unos niveles adecuados de chispas producidas. La bujía tipo "Q" está diseñada principalmente para sistemas de encendido de descarga capacitiva de alto rendimiento, en que la producción de chispas puede reducirse considerablemente por la</p>

**CHAMPION'S SUPPRESSORS
AND RFI *cont.***

reduced by a spark plug's resistance. In the early 1970's Champion developed these suppressor plugs which use a wire wound inductive coil to reduce RFI without negatively affecting ignition performance. These coils are used in all Champion "Q" type suppressor plugs. "Q" type suppressor plugs are specified for many engines exported to countries like Canada and Australia where industry and government RFI standards require additional suppression.

The QJ19LM is a perfect example of a "Q" type replacement over a traditional RJ19LM spark plug. "Q" type spark plugs should always be replaced with a similar design. It can also be beneficial for engines using standard resistor styles (e.g. RJ19LM) to upgrade to the "Q" type in the same family.

Never replace a "Q" type spark plug with another resistor plug or a non-resistor plug. Usage of non-"Q" types can actually cause engine misfire and a loss in performance

**LES SUPPRESSEURS CHAMPION
ET IFR *suite***

performance dont la puissance d'allumage serait considérablement réduite par une résistance. Au début des années 1970, Champion a mis au point ces bougies à suppresseur munies d'une bobine d'induction spiralée pour réduire les parasites radioélectriques sans nuire à la performance de l'allumage. Ces bobines sont utilisées sur toutes les bougies à suppresseur de type Q Champion. Ces bougies sont spécifiées pour de nombreux moteurs exportés vers des pays comme le Canada et l'Australie, où l'industrie et le gouvernement exigent une suppression supérieure des parasites radioélectriques.

La bougie QJ19LM est un exemple parfait d'une bougie de rechange de type Q plutôt qu'une bougie traditionnelle RJ19LM. Les bougies de type Q doivent toujours être remplacées par une bougie de conception similaire. Elles sont également un excellent choix pour les moteurs dotés de bougies à résistances ordinaires (ex. : RJ19LM).

On ne doit jamais remplacer une bougie de type Q par une bougie dotée d'une résistance différente ou sans résistance. L'utilisation d'une bougie autre que de type Q peut en fait entraîner des ratés d'allumages et une perte de performance.

**LOS SUPRESORES DE CHAMPION Y LAS
INTERFERENCIAS DE RADIOFRECUENCIA *cont.***

resistencia de una bujía. A principios de los 70, Champion desarrolló estas bujías con supresor que usan una bobina inductora de hilo arrollado para reducir las interferencias de radiofrecuencia sin afectar negativamente el rendimiento de encendido. Estas bobinas se usan en todas las bujías con supresor tipo "Q" de Champion. Las bujías supresoras tipo "Q" están especificadas para muchos motores exportados a países como Canadá y Australia donde las normas de la industria y del gobierno acerca de las interferencias de radiofrecuencia requieren una supresión adicional.

La bujía QJ19LM es un ejemplo perfecto de una bujía de repuesto tipo "Q" comparada con la bujía tradicional RJ19LM. Las bujías tipo "Q" deben ser reemplazadas siempre por bujías con un diseño similar. También pueden ser beneficiosas para motores que usen estilos de resistores normales (por ejemplo, RJ19LM) para actualizarlos al tipo "Q" de la misma familia.

No reemplace nunca una bujía tipo "Q" por otra bujía con resistor o sin resistor. El uso de bujías que no son del tipo "Q" puede realmente causar fallas de encendido y una pérdida de rendimiento.

F.I.S.S. Resistor (Fired In Suppressor Seal)

The F.I.S.S. resistor was added to the Champion spark plug line in the mid-1990's. Although primarily used in automotive plugs, this unique and highly durable suppressor can be easily identified in all Champion automotive plugs that have a black terminal end. The Champion F.I.S.S. process uses a proprietary glass mixture that has inherent resistive qualities to help suppress RFI in the ignition system. The glass mixture is melted in a heated kiln and forms a solid glass seal when the plug terminal is assembled and the mixture cools inside the insulator. The cooling action also produces a perfect hermetic seal for the center electrode. The Champion F.I.S.S. resistor provides technicians the ability to check resistance with a conventional DVOM (Digital Volt Ohmmeter). The Champion F.I.S.S. resistor will produce a terminal resistance in the range of 3,000-10,000 ohms at room temperature.

Résistance F.I.S.S. (allumage dans le suppresseur)

La résistance F.I.S.S. a été ajoutée à la ligne de bougies Champion au milieu des années 1990. Bien que principalement utilisé dans les bougies automobiles, ce suppresseur unique et très durable est facilement identifiable dans toutes les bougies automobiles Champion grâce à sa borne noire. Le procédé F.I.S.S. de Champion commence par le remplissage de l'isolant avec un mélange de verre breveté possédant des qualités de résistance qui contribuent à supprimer les parasites radioélectriques dans le système d'allumage. Le mélange de verre est ensuite fondu lorsque la bougie est passée dans un four chaud. Une fois que la borne de la bougie est assemblée dans le corps de l'isolant, le mélange refroidit et forme un joint de verre solide dans l'isolant. Son action refroidissante produit un scellement parfaitement hermétique pour l'électrode centrale ainsi qu'un suppresseur magnétique très durable. La résistance F.I.S.S. offre aux techniciens la capacité de vérifier la résistance au moyen d'un voltmètre numérique ordinaire. La résistance F.I.S.S. de Champion produit une résistance de 3 000 à 10 000 ohms à la borne à la température ambiante.

Resistor F.I.S.S. (sello de supresor fundido)

Se ha agregado el resistor F.I.S.S. a la gama de bujías Champion a mediados de los 90. Aunque se usa principalmente en las bujías automotrices, este supresor exclusivo de alta duración puede identificarse fácilmente en todas las bujías automotrices Champion que tengan una punta de terminal de color negro. El proceso F.I.S.S. de Champion usa una mezcla de vidrio propietario que tiene cualidades resistivas inherentes para contribuir a suprimir las interferencias de radiofrecuencia en el sistema de encendido. La mezcla de vidrio se funde en un horno rotatorio calentado y forma un sello de vidrio macizo cuando se monta el terminal de la bujía y la mezcla se enfría dentro del aislante. La acción de enfriamiento también produce un sello hermético perfecto para el electrodo central. El resistor F.I.S.S. de Champion proporciona a los técnicos la capacidad de comprobar la resistencia con un voltímetro/ohmímetro digital convencional. El resistor F.I.S.S. de Champion producirá una resistencia de terminales que oscila entre 3.000 y 10.000 ohmios a la temperatura ambiente.

Ash Deposits

CAUSES. Light brown deposits encrusted on the center and/or ground electrode are signs of ash deposits.

These deposits are caused by excessive oil or gas additives.

If the deposits are on one side of the plug, this is an indication of upper engine wear (valves, seals, cylinder head).

If the deposits appear all around the electrode this usually means lower engine wear (cylinders, pistons).

Oil / Fuel Fouled

CAUSES. Oil fouling occurs when oil is allowed to enter the combustion chamber.

Oil deposits cover the spark plug which keeps the spark from "arcing across the gap".

Instead it takes the shorter path to ground through the oil.

Usually a sign of advanced engine wear.

Carbon Fouled

CAUSES. Soft, black, sooty dry deposits on plug indicate carbon fouling.

Carbon fouling is an indication of a rich air-fuel mixture, weak ignition or improper heat range (too cold).

Carbon deposits are conductive and can create a path for spark plug misfire.

Check fuel, ignition, engine performance before plug replacement.

Too Hot

CAUSES. Chalky white insulator (with no tan coloring) pitted or blistered electrodes indicate the plug is running too hot.

In some cases the insulator will begin to turn gray or dark blue. Improper heat range plug, lean air fuel mixture or ignition timing may cause this condition.

Pay attention to exhaust restrictions or engine overheating which may also cause plug overheating.

Dépôts de cendre

CAUSES. Des dépôts brun clair incrustés sur l'électrode centrale ou de masse indiquent des dépôts de cendre.

Ces dépôts sont causés par un excès d'additifs dans l'huile ou dans l'essence.

Si ces dépôts se trouvent sur un seul côté de la bougie, ils indiquent une usure dans la partie supérieure du moteur (soupapes, joints d'étanchéité, culasse).

Si les dépôts sont incrustés tout autour de l'électrode, ils indiquent une usure dans la partie inférieure du moteur (cylindres, pistons).

Encrassement par l'huile / le carburant

CAUSES. L'encrassement par l'huile se produit lorsque de l'huile pénètre dans la chambre de combustion.

Des dépôts d'huile recouvrent la bougie, empêchant l'étincelle de former son arc dans l'écartement de la bougie.

L'étincelle emprunte plutôt le chemin le plus court vers la masse, c'est-à-dire le dépôt d'huile.

Généralement le signe d'une forte usure du moteur.

Calaminage

CAUSES. Des dépôts de suie noirs, mous et secs sur la bougie indiquent un calaminage.

Le calaminage est le résultat d'un mélange carburé riche, d'un piètre allumage et d'une gamme thermique inadéquate (trop froide).

Le calaminage est conducteur et peut former un chemin idéal pour les ratés d'allumage.

Vérifier le carburant, l'allumage et la performance du moteur avant de remplacer les bougies.

Surchauffe des bougies

CAUSES. Un isolant présentant des dépôts blancs crayeux (sans coloration jaunâtre) ou des électrodes présentant des piqûres ou des cloques indiquent que la bougie devient trop chaude.

Dans certains cas, l'isolant commence à devenir gris ou bleu foncé.

Ce problème peut être causé par une gamme thermique de bougie inadéquate, un mélange carburé pauvre ou une piètre distribution de l'allumage.

Porter une attention particulière aux restrictions d'échappement et à la surchauffe du moteur, lesquels peuvent aussi entraîner une surchauffe des bougies.

Depósitos de ceniza

CAUSAS. La presencia de depósitos de color pardo claro incrustados en el electrodo central y de tierra son indicios de depósitos de ceniza.

Estos depósitos se deben a un contenido excesivo de aditivos en el aceite y la gasolina.

Si los depósitos están a un lado de la bujía, esto es indicativo de un desgaste de la parte superior del motor (válvulas, sellos, culata).

Si los depósitos aparecen alrededor del electrodo, normalmente esto significa que existe un desgaste en la parte inferior del motor (cilindros, pistones).

Incrustaciones de aceite / combustible

CAUSAS. Las incrustaciones de aceite se producen cuando se permite el paso de aceite a la cámara de combustión.

Los depósitos de aceite cubren la bujía, lo que impide que la chispa forme un arco entre las puntas de los electrodos.

La chispa, en vez de saltar, se propaga por la vía más corta pasando a tierra por el aceite.

Normalmente es un indicio de desgaste avanzado del motor.

Incrustaciones de carbón

CAUSAS. La presencia en la bujía de depósitos secos y blandos tipo hollín de color negro es indicativa de las incrustaciones de carbón.

Las incrustaciones de carbón se deben a una mezcla rica de aire y combustible, encendido débil o gama térmica indebida (demasiado frío).

Los depósitos de carbón son conductores y pueden formar una vía para las fallas de encendido de la bujía.

Compruebe el combustible, el sistema de encendido y el rendimiento del motor antes de reemplazar la bujía.

Demasiado caliente

CAUSAS. La presencia de un aislador con aspecto de polvo de tiza y color blanco (sin tonos de color tostado) o de electrodos con ampollas indican que la bujía está funcionando a una temperatura demasiado alta.

En algunos casos el aislador empezará a volverse de color gris o azul oscuro.

Este problema se puede deber a bujías de gama térmica indebida, mezcla pobre de aire y combustible o la sincronización del encendido puede ser la causa de este problema.

Preste atención a las restricciones de escape o al recalentamiento del motor, lo que también puede recalentar las bujías.

ECO-CLEAN™

Designed to power today's small engines!

Champion® Eco-Clean™ small engine spark plugs feature:

- Fine-wire center electrode that improves ignitability with focused spark for faster, easier and more consistent starting
- Patented Rib Core Nose design fights fouling and provides an alternate spark path to ensure better engine operation
- Easier, cleaner starts and reduced engine emissions
- "Q" Inductive suppressor meets global compliance standards and delivers EMI and RFI protection

- **Reduced Emissions**
- **Improved Fuel Economy**
- **Direct Fit Replacement**
- **Globally Compliant**
- **Made in U.S.A.**

Also Available in Shop Packs

- Convenient 24 plug quantities
- Ideal for small engine repair shops and lawn and landscape professionals
